Hi Andrew: I don't know whether or not I have told you the story of this QSL card. Here goes. Back in the later part of 1969, when I worked for Westinghouse, we built three specialized Radars for the Air Force to be used to score the accuracy of our Multi warhead ICBM's. I Installed onr aboard the USS Houston, and the other two were to be installed on two Islands in the Phoenix Islqnd Group, I was lead Engineer on the installation on Canton Island, and a second installation was made on the Island of Enderbery, 30 miles away.

When I learned that I was to be on the installation team, I imediatwly thought that it would be nice if we had a ham rig along so that phone parches could be made back ro the Stares for the members of our crew. I approached the Project Leader with the idea and much to my surprise he was all for it! I called the FCC office in Wash D C to find out what license I would need to operate from Canton Island, I was told that Canton Island was claimed by both the US and Great Britton. The Island was divided right down rhe middle. Our installation eas to be made on the US side naturally, so they said I could use my Stateside call portasle KB6 (the prefix for the phoenix island groupe.)

Someone in the FCC office aparently leaked the fact that I was to be operating from Canton to the East Coast DX Asso. because they were on the phone almost immediately asking questions about my "{DXpeditioyno Canton Island. BEEN HAVING TRBL WEID MY COMPUTER SENDING E-MAILS. LETS SEE IF IT WILL SEND THIS AND IF IT DOES I'LL SEND YUO THE
